EXECUTIVE SUMMARY

I am a second-year B.Tech student in Artificial Intelligence and Data Science with a strong interest in software development, operating systems, and hardware systems. I enjoy building practical projects that combine algorithmic thinking with real-world problem solving. My experience ranges from developing web applications and automation tools to building and piloting drones. I am particularly interested in exploring machine learning applications and system-level development while continuously improving my programming and problem-solving skills.

SKILLS

Programming Languages: Python, C, Java(Basics), C++
Web development: HTML5, CSS3, Javascript, React Native(Basics)
Tools: Cloudflare Workers, MySQL
Concepts: Data Structures & Algorithms
Languages: English, Hindi, Kannada and Tamil

PROJECTS

LOS Drone Project[|Demo](#) Nov 2024 - Jun 2025

Built and piloted a Line-Of-Sight (LOS) drone during first year, learning drone hardware fundamentals including frame assembly, motor setup, ESC connections, and flight controller calibration. Gained hands-on experience in hardware integration, system debugging, flight stability, and manual piloting.

Ignitreron Website[|Demo](#) Aug 2025 - Sep 2025

Developed a website for the Ignitreron technical community at my college, focusing on a responsive and structured interface to showcase community activities and initiatives. Worked on clean UI design, effective content organization, and scalable development. The project is completed and currently awaiting deployment.

Alumni Wisher[|Demo](#) Sep 2025 - Oct 2025

Worked on a college-assigned project to develop an automated system for sending birthday and anniversary wishes to alumni. Contributed to database organization and backend logic for personalized message generation, aiming to improve alumni engagement through timely communication.

AI Snake Game[|Demo](#) Sep 2025 - Nov 2025

Developed an intelligent Snake Game in Python demonstrating the use of data structures and algorithms in game logic. Implemented a heap-based shortest path algorithm for optimal pathfinding while avoiding collisions. The project strengthened my understanding of algorithmic problem solving, pathfinding, and AI-like game behavior.

EDUCATION CREDENTIALS

2024 - present	B.Tech Artificial Intelligence and Data Science at KPR Institute of Engineering and Technology
2024	Class 12th State Board at SFS PU College, Bangalore
2022	Class 10th CBSE Board at Maithry Vidyanikethan, Bangalore

ACHIEVEMENTS

Secured 2nd place in BIT Hackathon | Apr 2025

Developed an AI career Bot and hosted it in web with my team during this hackathon, demonstrating problem

Certification on Python basics - Hackerrank | Aug 2025

Completed certification testing my knowledge in Python programming.

Secured 1st place in RoboSoccer - IIT BHU | Feb 2025

Designed and controlled a robot to compete in a robotic soccer challenge, demonstrating hardware control.

Secured 3rd place in Botstacle - IIT BHU | Feb 2025

Built a robot for an obstacle course, showcasing control systems and hardware integration.
